14: Substituent Effects

14.1 Substituents and Their Effects
Substituent Effects (14.1A)
Some Reactions or Properties
Transmission of Substituent Effects
Substituents (14.1B)
A List of Substituents
Structure-Reactivity Correlations

14.2 Carboxylic Acid Acidity
Substituent Effects on Acidity Constants (14.2A)
Magnitude of the Effect
Origin of the Substituent Effect
When the Substituent is F
How C-F Polarity Affects Acidity,
Inductive Effects for Other S Groups (14.2B)
Electron Withdrawing Groups
Electron Donating Groups
+i and -I Groups
Location of S Groups (14.2C)
Distance Attenuation
Field Effects
Additivity of Inductive Effects
Inductive Effects are General

14.3 SN1 Reactions
Origin of the Substituent Effect (14.3A)
Some Substrates S-R-Y (14.3B)
Solvolyis of Adamantyl Tosylates
Solvolyis of Cumyl Chlorides
Resonance
Resonance Effects (14.3B)
p-Substituted Cumyl Chlorides
The Substituents F and CH₃O
The Origin of the Resonance Effect
R Effects of Substituents
+iR Groups
-R Groups
Correspondence between I and R Properties

14.4 Electrophilic Aromatic Substitution Reactions
Reactions on Substituted Benzenes (14.4A)
Rates and Products Depend on S
meta versus ortho/para Directors
Directive Effects of Substituents (14.4B)
Resonance Structures for o, m, and p Reactions
+iR Groups
-R Groups
(continued)
Reactivity of Substituted Benzenes (14.4C)
- $R$ Substituents
- +$R$ Substituents
  I and R Effects Can Compete
  Halogens have Contradictory Rate and Product Effects
Reactions at the ortho Positions (14.4D)
Statistical Effects
Steric Hindrance
Additional Considerations
Multiple Substituents (14.4E)
  1,4-Dimethylbenzene
  1,3-Dinitrobenzene
  1,3-Dimethylbenzene
  1,2-Benzenedicarboxylic Acid
  p-Chlorotoluene
  m-Chlorotoluene
